

okuma

RISING WITH EVERY CHALLENGE

The average person might stumble upon a remote beach and find inspiration in the texture of the sand, curl of the waves and the salty spice of the air. For the community of anglers, however, playing witness to nature is far less satisfying than direct participation.

As we approach every piece of water, our attention inevitably falls to what lies beneath the surface: beneath the waves, off the point, on the edge of structure, at the intersection of currents. It's the fish and their habits, their power and speed that captivate our attention. Through rod and reel we find our connection. Some call it sport. We call it a way of life that's rich with experiences.

At Okuma Fishing Tackle, our goal is to enhance every encounter. Integrating the latest advancements in materials and construction techniques is a means to downplay the presence of the gear. Eliminate weight and increase feel. Enjoy a running fish instead of fearing it. Button down the drag and go toe-to-toe with complete confidence. Your focus is not on the equipment; it's on the fish.

Wherever your travels take you, from the local pond to distant reef, we're proud to be your partner in the discovery of what lies beneath.

SPINNING REEL TECHNOLOGY

MAXGEAR

Makaira reels feature a forged, machine cut stainless steel main gear paired with a 17-4 stainless steel pinion gear. This gear system is unmatched in this category.

ALG

With today's super braided lines & lighter more compact reels, ALG offers anglers lighter weight gears without compromising on strength & durability. Adding to their longevity, ALG gears are anodized to hold up to the elements much better than traditional gearing materials.

HDGII

Okuma's proprietary High Density Gearing II incorporates an extremely strong alloy composition with a special anti-corrosion coating process. The result is high density, corrosion resistant gears that are built to handle the severe elements & brutal strains placed on a reel's internal gear system.

PRECISION ELLIPTICAL GEARING SYSTEM

The Precision Elliptical Gearing System advantage boils down to one thing & one thing only - performance. By regulating the speed of the spindle stroke, reels equipped with this system wind line more consistently & uniformly on the spool, resulting in level line lay. This creates less friction during casting for increased distance, greater accuracy & longer line life, as well as smoother, more uniform drag pressures. Pick up any Okuma reel equipped with this feature & feel for yourself the balance, smoothness & power that are all characteristics of the Precision Elliptical Gearing System.

SPINNING REEL DUAL FORCE DRAG

DFD incorporates both surfaces of the spool to maximize high-end drag pressure, efficiency & overall smoothness. Mounted in the top of the spool & protected by the Hydro Block system is a multi-disc felt drag system that works in conjunction with a secondary drag system that is mounted under the spool. Even pressure is applied to both surfaces of the spool for maximum stability.

LITECAST™

Litecast™ is the latest in Okuma's reel technology. Reels with the Litecast™ structure are composed using a magnesium material in the casting process, making the integrity of the reel incredibly strong & 15% lighter than aluminum alloy reels. Okuma Cedros Saltwater Spinning Reels feature the new Litecast™ construction.

ALUMILITE FRAME CONSTRUCTION

AlumiLite construction incorporates Okuma's rigid aluminum body technology on spinning, trolling and fly reel designs. Aluminum frames are stronger and more rigid and are capable of withstanding more pressure and torque than traditional graphite frames. These lightweight, diecast aluminum frames provide more precise tolerances for precision gear alignment, maximum castability and ultimate durability.

C-40X

Okuma's C-40X carbon technology utilizes a specially blended graphite polymer. The carbon fibers in this material are elongated & reinforced, creating a substantially stronger composite than standard graphite materials. At 25% lighter, 1.5 times stronger & 100% anti-corrosive, C-40X translates into an extremely lightweight & durable construction.

TORSION CONTROL ARMOR

The Torsion Control Armor (TCA) design found on the new Inspria spinning reels is made with Okuma's C-40X long-strand carbon fiber technology. This not only makes the reel lighter, but also makes the reel extremely rigid which reduces twist & torque, keeping the internal parts in perfect alignment.

CYCLONIC FLOW ROTOR

The Cyclonic Flow Rotor (CFR) was designed to create a "cyclonic" airflow, which significantly increases air flow through the ported rotor. This thoroughly tested design allows for a much faster drying time if the reel becomes wet, minimizing corrosion possibilities throughout the reel.

CENTRIFUGAL DISC BAIL

Okuma's Centrifugal Disc Bail (CDB) is a unique new design that incorporates a heavier brass disc that is perfectly weighted & balanced to create a smoother & easier bail operation, while increasing the strength & stability of the overall bail function.

SPINNING REEL TECHNOLOGY

QUICK-SET

This system allows for instant handle engagement & eliminates all handle back play commonly found in many reels. This is accomplished by using a corrosion-resistant stainless steel roller bearing that engages the reel in one direction for rock-solid hook sets.

EFR II

The Even Flow Roller System utilizes a ball bearing under the line roller to maximize efficiency. This roller helps reduce line twists by freely rolling over the line roller without friction. Without this system, line will naturally twist when drag is pulled.

BAITFEEDING SYSTEM

Okuma's baitfeeding system allows anglers to disengage their spinning reel spool & allow their bait to run freely. The baitfeeding system incorporates a secondary micro-adjustable drag system at the rear of the reel that allows for precise adjustment of the spool for bait control. In order to disengage this system simply turn the handle. The On/Off lever on the rear of the reel will automatically disengage the baitfeeding system so you can fight your fish with the main drag system.

RES II

The RES II System stands for Rotor Equalizing System. This second-generation RES System incorporates a computer-balanced weight precisely placed in the rotor. This weight allows for precision balance & eliminates all spool wobble for perfect alignments & smooth cranking.

HIGH PERFORMANCE BEARINGS

The balls used on the HPB's are constructed from the same high-grade stainless steel material as the bearing housing. These bearings were designed to be more than 10 times more resistant to saltwater than standard stainless steel bearings. These bearings may even outlast the angler himself.

HYDRO BLOCK

The Hydro Block design features a rubber gasket mounted in the top of a spinning reel spool. This rubber seal blocks water & foreign materials from entering the drag system. The Hydro Block system ensures that your drag washers always perform at optimal levels.

LOW PROFILE REEL TECHNOLOGY

FLITE™ SPOOL

Flight spool is a Dream Tackle Design allowing Okuma to offer a super tuned spool on our premium baitcast reels. The spool is 33mm in diameter and was developed for long distance casting as well as finesse style fishing. The complete spool design weighs in at just 0.33 ounces as a result of its uniform thickness, which is what helps set this super tuned spool apart from others.

LITECAST™

Litecast™ is the latest in Okuma's reel technology. Reels with the Litecast™ structure are composed using a magnesium material in the casting process, making the integrity of the reel incredibly strong & 15% lighter than aluminum alloy reels. Okuma Hakai Baitfeeder Reels feature the new Litecast™ construction.

MCS

Okuma's Magnetic Control System reduces backlash & improves casting distance by utilizing the magnetic field generated by the high RPM spinning of the spool during casting. The magnetic field is influenced by the adjustable cast control magnets which exert an opposing force & allows for minute & accurate adjustments.

VELOCITY CONTROL

The Velocity Control System is an adjustable, 6-pin centrifugal braking system for precision spool control. Weights can be adjusted IN or OUT for additional spool control. Positioning the weights in toward the spool allows for more freespool, while adjusting the pins out away from the spool allows for more control. Anglers can alternate weights until they find that perfect balance for casting.

SPOOL ACCESS PORT

This unique new design can be found on Okuma's low profile baitcast reels. The Spool Access Port allows for quick access to the spool by simply sliding the lock/unlock lever on the sideplate opposite the handle. This system allows for quick spool changes, but more importantly it allows quick access for adjusting the Velocity Control System.

FLITE™ SHAFT

Flite shaft is a patented hollow stainless steel spool shaft with precision stainless steel balls pressed on each end. These balls rotate under pressure to reduce friction and help increase casting distance. Providing the perfect balance point between weight, strength and smoothness.

UNIVERSAL LINE DIAM INDICATOR

Always know what line you spooled on your reel when you pick it up.

TGT (TRACTION GRIP TECHNOLOGY)

Okuma TGT is made of non-slip durable materials that not only provides maximum grip, but comfort and control in all weather conditions.

TROLLING AND CONVENTIONAL REEL TECHNOLOGY

XL GEARING

The XL gearing design found on both lever drag & star drag reels incorporates an oversized gear box that features an enlarged gearing system & enlarged drag system. The drag surface areas on this system are more than 50% larger than a standard gear-box design. For the gear system, the major advantage is that the gear teeth are substantially larger, allowing more strength & cranking power. This is how we are able to offer a high-speed gear ratio reel without sacrificing cranking power. Our XL gearing system essentially turns your reel into a winch.

SELF LUBRICATING GEAR SYSTEM

The self-lubricating gear system is a feature found on Okuma's higher-end star drag reels. The main gear on this system incorporates a heat-sensitive oil-impregnated brass bushing that is mounted in the center of the gear. This system releases oil if friction increases to keep the main gear & drive shaft running smoothly in all conditions. Okuma is the first company to adopt this technology which originated in the large machine industry where this function has been time tested for many years.

MACHINED RIGID FRAME

Okuma's Machined Rigid Frame construction incorporates a one-piece fully-machined aluminum frame. These rigid bar-stock aluminum frames are the ultimate in precision alignment & tolerances withstanding more pressure & torque than any other material used in our industry for frame materials. Okuma features these anodized frames on fly reels, baitcast reels, lever drag reels & star drag trolling reels.

LEVER DRAG DUAL FORCE DRAG

For extremely smooth & strong drag outputs, Okuma's Makaira and Alijo's 2-speed reels are designed with a patented Dual Force Drag system. This drag system is specifically engineered to be mounted in the right side of the spool, designed around a Pull Bar Drag System which keeps all mechanical workings in precise alignment & places no pressure on the frame. This system works in conjunction with a custom designed thrust bearing, which alleviates side load at heavy drag settings.

BODY ARMOR

Okuma's stainless steel Body Armor eliminates the frame flex commonly found in graphite framed trolling reels. This feature incorporates two large stainless steel rings that are mounted to both sides of the frame. The harness lugs are integrated into the body armor design & eliminate the pressure commonly placed on the harness lugs by redistributing the pressure to these large-diameter rings.

2-SPEED GEARING

Okuma's 2-speed technology incorporates two sets of stainless steel main & pinion gears, allowing anglers the option of a high-speed gear ratio or a powerful low-speed gear ratio for maximum power & torque. To shift gears it is as easy as pushing a button or popping a lever with Okuma's unique shifting design to obtain the appropriate gear ratio you desire.

SPEED LOC PINION GEAR SYSTEM

The SLG technology incorporates a dual-step pinion gear system on star drag reels that allows positive engaging at extreme high speeds. The SLG system allows for instant gear engagement when engaging from freespool to strike at speeds in excess of 50 MPH.

MSS

Strong, Stable, Smooth - Okuma's Mechanical Stabilizing System is a support system that ties the spool shaft, pinion gear, pinion gear bearing, drive shaft & main gear together with a single support system. While other reels on the market offer minimal or no gear stabilization, this patented Okuma design allows all of these critical parts to stay in precise alignment. Designed specifically to hold up to the demands of braided & wire line fishing, the MSS support system stabilizes the spool shaft at 3 key stress points to eliminate flex under pressure - which directly translates into a reel that is more durable, stronger & smoother than the competition.

MCS

Okuma's Magnetic Control System is a fully-sealed, 100% waterproof cast control system that reduces backlash & improves casting distance by utilizing the magnetic field generated by the high RPM spinning of the spool during casting. The magnetic field is influenced by the adjustable cast control magnet which exerts an opposing force & allows for minute & accurate adjustments.

WIDE MOUTH LEVELWIND

This heavy-duty, stainless steel levelwind is Titanium coated & built to withstand the punishment of both braided & wire lines. The guide has been designed with an increased opening to insure proper knot clearance when fishing with double lines. This wide space allows for Albright or similar connection knots, as well as swivels & copper line to pass through the guide easier & be wound directly on the spool.

STRIKE ZONE

Okuma's Strike Zone linecounter system incorporates a mechanical counter that precisely measures line based on spool revolutions. These counters measure in feet & are calibrated at the factory to be most accurate with a full spool & monofilament lines.

T-BAR HANDLE

T-Bar Handle: The patented design of the T-Bar handle offers a true ergonomically correct angle to ensure an angler gets maximum power with minimum fatigue. The T-bar takes full advantage of the natural dynamics of the human hand, wrist & forearm to help sustain power & endurance for the angler.

ERGO GRIP

The Ergo Grip handle knob is an extremely comfortable oversized handle-knob design for both speed & power. This soft-touch knob has been ergonomically designed to fit in the palm of your hand & will be found on certain Okuma lever drag reels, star drag reels & some spinning reel models.

HIPPO GRIP

The Hippo Grip is a unique reel-clamp design that serves triple duty when fishing offshore. This heavy-duty, forged aluminum reel clamp securely supports your reel to the rod for maximum safety. This clamp also incorporates a small hole that was designed to be used with a safety line for trolling. On the rear of the clamp is a large diameter hole that was designed to be used as a trigger. The large hole should be mounted facing the butt of the rod.

CRC

Okuma's Corrosion Resistance Coating (CRC) consists of a thin layer of Corrosion X HD applied to all internal & external parts. The CRC process actually penetrates & bonds to the metal, which helps significantly in the reduction of corrosion, & towards the long term protection of your reel.

SPINNING REELS

SPINNING - SALTWATER

MAKAIRA®

- Forged aluminum, machine cut body/sideplate - Forged aluminum, machine cut Cyclonic Flow rotor - Forged stainless steel main gear for ultimate power and strength - Precision machine cut 17-4 grade stainless steel pinion gear - Oversized 17-4 grade stainless steel spool shaft reduces flex - Hydro Sealed Body and DFD system for maximum protection - Carbonite high output drag with Cal's drag grease on full DFD - Customized pre-set drag system, works like a lever drag reel - 9HPB + 1RB corrosion resistant stainless steel bearings - Dual anti-reverse system for maximum strength and reliability - Quick-Set stainless steel German anti-reverse roller bearing - CRC: Corrosion-resistant coating process - Machined aluminum, 2-tone anodized spool with LCS lip - Machined aluminum screw-in handle arm for added strength - Right and Left handles are designed differently: Order by Rt/Lt - Heavy duty, solid aluminum bail wire with manual trip function - Rotor brake system works in conjunction with manual bail trip - Machined aluminum handle knob: Custom options available

NEW

TESORO

The ultimate saltwater performer, the Tesoro features an oversized brass drive gear for strength and durability – further enhanced by the Gearing Stabilization Design for improved gear alignment. The IPX-7 rated Hydro Sealed Body protects against full water submersion and splashing. Within the Tesoro's full-Alumilite body resides a Dual Force Drag system with a whopping 29,9 kgs of max drag power.

- Full-Alumilite Body & Sideplate
- IPX-7 Rated Hydro Sealed Body CFR: Cyclonic Flow Rotor
- Carbonite High-Output Drag with Cal's Drag Grease on Full Dual Force Drag
- 12HPB + 1RB Corrosion-Resistant Stainless Steel Bearings
- Dual Anti-Reverse System for Maximum Strength and Reliability
- Machined Aluminum Screw-In Handle Arm for Added Strength
- Smooth Machine-Cut Brass Gearing with an Over-Sized Drive Gear
- Gearing Stabilization Design for Gear Alignment
- Frictionless Main Shaft Design
- Oversized Titanium Spool Shaft for Maximum Strength-to-Weight Ratio

SALINA

The Salina saltwater spinning reel's LITECAST magnesium alloy construction provides the strength and rigidity of aluminum – but 15 % lighter. Building on that foundation of muscle, the Salina offers a Dual Force Drag system with 20 kg max drag power. When fighting strong fish, the 3-point pinion gear stabilization design provides precise alignment, even under heavy loads.

- DFD: Precision Dual Force Drag System
- LITECAST Construction
- Multi-Disc Drag Adjustment for More Precise Settings
- • 20 kg Max Drag | 6HPB + 1RB Corrosion-Resistant Stainless Steel Bearings
- Full Grease Pack Prevents Water Intrusion
- Rubber-Sealed Bearings for Ultimate Protection
- Machined Aluminum Screw-In Handle
- Machined Aluminum 2-Tone Anodized Round Knob
- Even Flow Roller System with DLC Coating
- Manual Bail Trip Function for Ultimate Reliability
- Machined Aluminum 2-Tone Anodized Spool

CEDROS

Specifically designed for saltwater use, the Cedros spinning reels feature Okuma's Litecast Blade body design, Dual Force Drag System for extreme stopping power & our proprietary High Density Gearing with a special corrosion resistant coating. Combine this with a high-speed gear ratio & a customized aluminum handle, you have one of the best saltwater jig fishing reels on the market.

- DFD: Precision Dual Force Drag system
- Multi-disc drag adjustment for more precise settings
- LITECAST: Body construction is 15% lighter
- CRC: Corrosion resistant coating process
- 6HPB + 1RB corrosion resistant stainless steel bearings
- Dual anti-reverse feature on 8000-14000 sizes
- Quick-Set anti-reverse roller bearing
- Manual bail trip function 8000-14000 sizes
- HDGI: Corrosion resistant, High density gearing
- Precision machine cut brass pinion gear
- Machined aluminum, 2-tone anodized spool
- Machined aluminum, screw-in handle arm

CEYMAR HD

Continuing the top-selling line-up, the Ceymar HD offers crossover performance for both fresh and saltwater anglers. The spinning reel's oversized drive gear delivers increased power and durability – while the Gearing Stabilization Design improves gear alignment for smooth and reliable operation. The Ceymar HD's machined aluminum screw-in handle is in direct contact with gears and reduces handle play and improves the overall feel while cranking.

- HDG-II: High-Density Gearing II
- Oversized Gearing
- Corrosion-Resistant Graphite Body
- Gearing Stabilization Design
- Aluminum Screw-In Handle
- Frictionless Main Shaft Design
- Even Flow Roller System with DLC Coating

BIG PIT - SURF

NEW

FLITE SURF

The Flite Surf is designed for professional long casting and extremely light weight. Equipped with C-40X body and rotor, ultra-lightweight spool, screw-in handle and aluminum spool shaft for ultralightweight. Reduce wear and tear on fishing lines we designed a one-piece bail, and the other is a roller with a special DLC coating. All use HPB to achieve long-term corrosion resistance.

- 35mm stroke with super slow oscillation
- Light weight C-40X carbon frame and sideplates
- C-40X Cyclonic Flow Rotor for corrosion resistance
- One-Piece Bail
- Even Flow Roller System with DLC coating
- Frictionless main Shaft design
- Ultra-lightweight, A7075 aluminum shaft
- Ultra light Screw in handle
- Ultra light spool
- Rotor with tangle guard - prevents line from entering the shaft
- Rotor brake system
- Carbon fiber drag system
- Fast progressive drag
- All HPB Bearing
- Worm shaft transmission system

BIG PIT - CARP

NEW

OBSIDIAN

An extremely lightweight carp reel, the Obsidian is made with Okuma's C-40X carbon – the durable yet light graphite. The light and ergonomic feel is perfected by the ultralight spool and the frictionless main shaft design that eliminates resistance when reeling. Obsidian's super-slow oscillation, one-piece bail, and worm shaft transmission ensure exceptional line lay and superb casting.

- 35mm Stroke Spool with Super-Slow Oscillation
- Lightweight C-40X Carbon Frame & Side Plate
- C-40X Consturcion & Cyclonic Flow Rotor For Corrosion Resistance
- Ultralight Screw-In Handle
- Ultralight Spool
- Even Flow Roller System with DLC Coating

BAITCAST REELS

BAITCASTING

KOMODO SS LOWPROFILES

The Komodo family of low-profile baitcast reels has been the recipient of tremendous accolades. One of our favorites being from a 30-year big fish veteran regularly referring to the reel as a "excellent value" or "best toughness and value I've ever seen." This is no surprise. Komodo reels, featuring stainless steel gearing and drive shafts, along with amazing levels of drag output, take on the largest freshwater fish like pike and salmon, along with the toughest inshore species like bass with a level of power and durability that is best in their class. The selection includes two sizes, with options in gear ratios and handles to deliver the perfect reel for your big fish applications.

- Stainless steel main gear for ultimate power and strength
- Precision machine-cut stainless steel pinion gear
- Heavy-duty stainless steel drive and spool shafts
- ALC: Rigid diecast aluminum frame and gear sideplate
- CRC: Corrosion-Resistant Coating process
- A6061-T6 machined aluminum, anodized spool
- Multi-disc high output Carbonite drag system
- Micro-click drag star for precise drag settings
- 350 size: 6HPB+1RB corrosion resistant stainless steel bearings
- 450 size: 7HPB+1RB corrosion-resistant stainless steel bearings
- Precision Japanese ABEC-5 spool bearings
- Dual anti-reverse for maximum reliability
- Quick-Set anti-reverse roller bearing
- 6-pin Velocity Control casting system
- Synchronized levelwind optimized for braided line
- Zirconium line guide inserts for use with braided line
- Available in both right and left hand retrieve
- On/Off clicker for trolling, chunking or bait fishing from size 300 and up

TROLLING REELS

MAKAIRA TROLLING REEL TECHNOLOGY

DUAL FORCE DRAG SYSTEM

The specialized carbon DFD or Dual Force Drag system used on all Makaira reels was specifically engineered to be mounted in the right side of the spool in order to bring all the mechanical workings closer together to maximize alignment and durability. The farther mechanical parts are separated the more opportunity there is for tolerance error and flexing which causes parts alignment issues. The DFD principal was specifically designed around the "Pull Bar Drag System". The major advantage to a "Pull Bar Drag System" is that the drag is being pulled rather than pushed. The most common type of lever drag in the industry is the "Push Bar Drag System". The Push Bar System places heavy pressure on the left side plate and utilizes the frame for overall stability which is a fatal flaw in this type of design. This pressure creates frame flex, reducing drag pressure and causing tolerance alignment issues. This problem is further exaggerated on open top designs from other companies. One of the major benefits to the pull bar design is that there is no pressure placed on the frame. Therefore, our open top frame designs will not suffer frame flex found in our competitors reels.

This highly efficient drag system was designed and engineered by Tiburon Engineering USA to increase maximum drag pressure, reduce side load pressure on ball bearings and improve heat dissipation for long term smoothness over extended periods. This Okuma DFD is considered a wet drag system comprised of two carbon fiber drag washers that are sandwiched together and bonded with a fiber glass core. Pure carbon washers are coated with a thin layer of Cal Sheet's Universal drag grease for virtually zero start up inertia. These washers are compressed by two precision ground 17-4 grade stainless steel drag plates that have been ground flat then polished for maximum smoothness. These stainless steel friction drag plates have a minimum 32 Rockwell hardness allowing for high-end drag settings and consistently smooth drag performance at all ranges. The drag system is secured to the right side of the spool by a 6061-T6 grade aluminum cover that features Type-II anodizing for maximum alignment, strength and corrosion resistance.

TOURNAMENT DRAG CAM IGFA LINE CLASSES FOR MAKAIIRA

Okuma's TDC or "Tournament Drag Cam" is designed with a more gradual ramp in the cam system that is intended for anglers fishing light line and tournament IGFA line classes. The standard cam that is installed in the Makaira reels is engineered to be compatible with braided line and offers aggressive drag ramps in order to output heavy drag ratings. The Makaira reels are engineered to output extreme drag pressure, but this is not required by all anglers. These reels have been designed to offer customization and with the TDC cam system, Okuma is offering anglers a reel that is versatile for a wide range of fishing applications, allowing anglers the ability to achieve a more gradual increase in drag settings.

SILENT ANTI-REVERSE:

The Makaira's proprietary anti-reverse system allows for a smoother and quieter feeling. We equate this feeling to that of a Lexus, when compared to other reels in the market. Most reels in the market hide their rough gear quality by the noise and vibration caused by the engagement and clacking of the anti-reverse pawls. The Okuma silent system is unlike any other 2-speed reel in the industry for smoothness. This anti-reverse system is supported by a 12 point double dog anti-reverse pawl system. The Makaira system is very simple in principal but the performance is extremely advanced. As you turn the reel forward the anti-reverse pawls slide open allowing a friction free and quiet retrieve. As soon as the handle is stopped or pulled backwards the anti-reverse pawls are engaged into place by their drive shaft actuated sliding system. The strength of this anti-reverse system does not solely rely on a dog spring like found on most of our competitors reels. The sliding function does not rely heavily on a dog spring system and is mainly controlled by the forward and reverse movement applied to the drive shaft through the movement of the angler turning the handle.

HELICAL CUT GEARING:

Makaira lever drag reels utilize helical cut main and pinion gears. This process allows for improved gear meshing which equates to improved gear smoothness. The angled teeth found in helical cut gears engage more gradually than straight cut or spur gear teeth. This allows helical gears to run smoother and quieter compared to spur gears. Spur gears cause impact stress and noise, because of the hard meshing and can not take as much torque as helical gears because their teeth are receiving impact blows as they mesh together.

GREASE AND OIL:

To further enhance the corrosion resistance of Makaira reels, Okuma applies our CRC or Corrosion Resistant Coating process to all internal and external parts for maximum protection. Our CRC process utilizes a coating process of Corrosion X HD formula that actually penetrates and bonds to the aluminum parts for long term protection. The extra steps taken in the assembly of the Makaira allows this reel to be a leader in the fishing tackle industry for long term use and performance. To further enhance the Makaira's function and performance, Okuma applies Cal's Universal drag grease to our carbon fiber drag washers for the smoothest wet drag system. The addition of Cal's drag grease allows for virtually zero start up inertia and smooth performance at all settings. Cal's Universal grease is also used for coating moving parts such as the main and pinion gears for improved performance.

CONVENTIONAL - TROLLING

MAKAIRA

- 6061-T6 machined aluminum frame with forged side plates - 17-4 grade stainless steel gearing - Helical cut gears for increased torque, smoothness and improved gear meshing - Makaira reels all feature two-speed gearing systems - Gold anodized two-speed gear shifter housing - Cold forged, Type-II anodized, machined aluminum spool - CRC: Corrosion Resistant Coating process - Patented spool pin system for use with braided or mono lines - Carbonite Dual Force drag system featuring Cal's universal drag grease - Custom designed thrust bearing: Alleviates side load on heavy drag settings - 4-pcs ABEC-5 precision Sapporo stainless steel ball bearings - MK-80WII features 6-pcs of Sapporo ball bearings - Double-dog, proprietary silent anti-reverse system - Ratcheting drag lever and pre-set knob for precise drag setting - Patented T-Bar handle with Easy Roll graphite insert on all models - Heavy duty stainless steel ratcheting clicker system - Heavy duty, 17-4 grade stainless steel drive and spool shafts - Type-II gold anodized frame, sideplates, spool, drag lever and handle - Open top frame design on 16II, 20II, and 50II - Lug and plug system on all open top reel models - Machined thumb rest on rear cross bar for improved ergonomics - Forged aluminum full hard anodized reel foot and reel clamp - Machine-etched marlin logo on left side plate - Precision placement of drain holes maximizes water removal from reel - Special screw ports around side plate screws reduces water/corrosion buildup

SOLTERRA B

Built to battle the strongest of fish, the Solterra SLX B is the new generation of the acclaimed Solterra saltwater trolling reels. Armed with thrust bearings, the Solterra SLX B withstands tremendous side loads and allows you to crank the handle with reduced resistance when under pressure. The modern finish perfects the performance-packed reel.

- Stainless Steel Main Gear, Pinion Gears & Shafts
- Carbonite Drag System with Cal's Universal Drag Grease
- Double Dog Silent Anti-Reverse on All Models
- Stainless Steel Body Armor Reduces Frame Flex (20-50W Models)
- Thrust Bearings Help Reduce Handle Turning Resistance

ALIJOS 2-SPEED

The Alijos 2-Speed Lever Drag is a lightweight, compact bodied, big fish stopping machine. Built with 6061-T6 machined aluminum for the ultimate in strength. The 1-piece frame continues around to the non-handle side, side plate which has a cast control system for precision spool control. The spool bearings are bathed in TSI oil giving it the ultimate in castability and frees spool. The Alijos reels feature a longer 90mm handle arm and oversized T-bar handle knob for great torque and comfort. The clicker mechanism has been reworked to give a louder clicking sound for trolling or dead stick applications. The new 2-speed shifting mechanism has been completely reworked by Okuma giving it the ultimate in shifting. The DFD: Dual Force Drag puts out tremendous drag pressure with its 100% larger drag plates.

- 17-4 grade stainless steel main and pinion gears
- Carbonite Dual Force Drag system with Cal's drag grease
- 6-NMB corrosion resistant stainless steel bearings
- Spool bearings feature TSI-301 oil for unmatched freespool
- Rigid 1-pcs frame and left sideplate construction
- 6061-T6 machined aluminum frame and sideplates
- Cold forged, Type-II anodized, machined aluminum spool
- Custom designed thrust bearing: Alleviates side load on heavy drag settings
- Silent retrieve system for ultimate cranking smoothness
- 90mm handle arm, increases cranking leverage/power
- Oversized T-Bar handle on all models, for cranking power
- Lug and plug harness system featured on 12 and 16 sizes
- External adjustable cast control system on left sideplate
- CRC: Corrosion Resistant Coating process

CAVALLA BLUE

Your guide to the deep blue, the Cavalla Blue lever drag reel covers a whole range of sea fishing, from vertical jigging to casting, trolling, and fishing with live bait. To handle the strength of species like the sailfish and yellow tuna, the Cavalla Blue is built with a rigid one-piece aluminum frame and side plate construction. The Corrosion-Resistant Coating process increases the reel's resistance against the elements.

- 6061-T6 Rigid Aluminum Frame & Side Plates
- Carbonite Drag Washers with Cal's Drag Grease
- Cold-Forged Type-II Anodized Machined Aluminum Spool
- 4 HPB Corrosion-Resistant Ball Bearings
- On/Off Bait Clicker
- CRC: Corrosion Resistant Coating Process
- 17-4 Grade Stainless Steel Main and Pinion Gears
- Silent Anti-Reverse System for Smooth Cranking
- Additional Stabilization Plate for Anti-Reverse

RODS

ROD TECHNOLOGY

UFR TECHNOLOGY

Strong, Stable, Smooth - Okuma's Mechanical Stabilizing System is a support system that ties the spool shaft, pinion gear, pinion gear bearing, drive shaft & main gear together with a single support system. While other reels on the market offer minimal or no gear stabilization, this patented Okuma design allows all of these critical parts to stay in precise alignment. Designed specifically to hold up to the demands of braided & wire line fishing, the MSS support system stabilizes the spool shaft at 3 key stress points to eliminate flex under pressure - which directly translates into a reel that is more durable, stronger & smoother than the competition.

COLD WATER IN-LINE

Designed for freshwater trolling, the Okuma Cold Water inline rod's moderate action and powerful and responsive 24-ton carbon blank are optimal for targeting agile and vigorous fish like salmon. The inline design of the Cold Water allows for a flexible structure with an even distribution of force when fighting the fish. The high-quality tip guide line material ensures the line endures stretch and stress without breaking.

- 24T Carbon Blank
- Fuji® DPS Reel Seat with Aluminum Double Lock
- Premium EVA Grip
- Anatomic Front Grip

INSPIRA

Purely designed for egi and tatakai fishing, the Inspira Egi & Tatakai's solid full-carbon grip transfers even the slightest of vibrations directly to your hands – allowing you to feel everything that happens beneath the surface. Covering shore and boat fishing techniques, the series' high-tonnage carbon blanks are fitted with premium Fuji® K Alconite line guides and tips specifically chosen for different applications. The removable hook keeper allows you to customize the rod just the way you want it.

- High-Modulus Carbon Blank
- Fuji® K Alconite Guides
- Fuji® VSS Reel Seat
- High-Quality Tip (Different for Each Application)
- Carbon Fiber Rear Grip
- Carbon Front Grip
- Aluminium Trim Connectors
- Removable Hook Keeper

FEEDER

NEW

THUNDER FEEDER

One, two, three – strike! Specifically designed for targeting the fierce sturgeon, Okuma's Thunder Sturgeon rod delivers extreme casting capabilities for bolting large baits into the distance. The rod's reinforced blank boasts incredible reserves of power and responsiveness to wrestle down the wildly jumping sturgeon – and to withstand even the most thunderous strikes.

- 4T+30T Carbon Blanks for Responsiveness, Power and Durability
- BOPP Spiral Reinforcement Blanks with the Alternate Matt and Glossy Showing
- Tangle-Free Stainless Steel Frame Guides Help Reduce Wind Knots
- Zirconium Inserts Offer Compatibility for both Braid and Mono
- Okuma Heavy Duty DPS-H Reel Seat
- Durable Shrink Tube Grips and EVA Foregrip with Good Balance Design
- 4-Tele Blank Design Offers Easy Transportation
- High Quality Cloth Bag Package

COMPETITION AVENGER

The Competition Avenger tele rods are built with a specific goal: an unmatched float fishing experience. The light yet powerful construction of the rod's high-modulus blank offers the sensitivity and power required for targeting (and lifting) large seabream from rocks and high ground. The high-quality components of the Competition Avenger allow for precise and exciting float fishing even in adverse conditions.

- Light and responsive 30T low resin carbon blanks.
- X-wrap carbon reinforcements improved strength and durability.
- Fuji K-Concept guide frames help reduce wind notes.
- Fuji Alconite guide inserts offer premium performance.
- Fuji NS Plate Type reel seat.
- High quality cloth bag.
